Until It's Gone

The Meeting Places

Buildings will replace the trees
Pollution will replace the air we breathe
I'm close to the mountain, 15 miles away
But I can't see the hills from here today
We can't just let it pass us by
And as I look into the sky
Something in the atmosphere
Is telling me won't be here for long
Take a picture of this place
Cause extinction is not so far away
Our skin will fry like a steak well done
When there's nothing between us and the sun
Until it's gone, until it's gone, until it's gone
We'll never miss it until it's gone

All the efforts seem to fail
With cars and cans of aerosol
I feel so guilty, then my pride will die
when I see the gray, self-created sky
Until we find a better way
We'll have to learn from all our big mistakes
Something in the atmosphere
Is telling me it won't be here for long
Seems like a letter that we cannot send
Fells like aluminum we cannot bend
Tastes like a mixture that we cannot blend
But we must change the course,
Of the recipe to the end
