

Grand Unification Pt 2

Fightstar

Mankind has always wondered
About the kind of universe it lives in
Mankind has always indulged in creation myths
And as far back as recorded history goes
And it's just human nature to want to understand
The universe we live in or where it came from
What it is now and where it's going
With all apologies you wake me up
You hold the porcelain to take me home
Hold my hand until the waves come
Hold my hand until the waves come
This is our last, take care love
It won't stop, it won't stop a thing
With all apologies you wake me up
You hold the porcelain to take me home
Hold my hand until the waves come
The waves come
Just hold my hand until the waves come
The waves come around
Well, the Einstein equations are sort of the Mount Everest
Of theoretical physics and you know we want to get to the top
We want to be able to make Einstein's equations routine to solve
We would like to have undergraduates
Be able to solve Einstein's equations routinely
Might as well have grade school kids doing it
Because you know, the physics is, is, is intuitive
Grade school kids know about black holes
And they might want to know well, gosh
What happens if I drop a black hole into a black hole
