

Instant

Theodore

The disease begins with restlessness, headache, a slight increase in body temperature, pain or discomfort and irritation at the site of injury
I kissed your heart
A period of stimulation is characterized by excessive sensitivity to light and sound, dilation of the pupil and increased salivation
I kissed your eyes, your ears and your tongue

Your teeth became bigger, your nails became sharper

I knew with a small bite in my neck I will be the same as you
A splash of water on your head and you are awake...
Did you create this sky of blue?

Did you create the flowers and the existence of sadness?
Did you forget to break your image in my mind?

Before you drag me inside
Your voice is in my head, a time full of memories

I want to drink every single glance released from you
But this is it

This is what is left behind

All the sweet memories are gone

You are gonna be the dream

I am gonna be the nightmare
Pain from the first sight

Love from every sign of hate
Destroy me now

Or let me fly away
You want it or not

Either burn me or not
But if you do it

Let me burn before the sunshine disappears
