Texas Stars

Carbon Leaf

Breathe in the night
Let it know just who you are
How you wish the weight of the world
Would unleash your shooting star
Look up at the light
Have you seen that star before?
How quickly dreams rearrange
When constellations are at war
Hey, lone star, it's all right
Did you look up to find, you were left behind?
Did your heroes and stars fade out?
Have you been let down by a love, a father, a friend?
Did the myth of greatness leave your side
With no desire to defend?
Did the chariots of fire burn you in the end?
Did you look up to find, you were left behind?
Did your heroes and stars fade?
Did the one you love, cradle you up above?

Will your heroes and stars play?
Breathe in the night
Let it know just who you are
There's still a girl inside of you
Connecting star to star
Glad to see you're taking flight
I'll spot the brightest one
So breathe, breathe, breathe in the night
Your journey's just begun
Did you look up to find, you were left behind?
Did your heroes and stars fade?
Did the one you love, cradle you up above?
Will your heroes and stars play?
You're a lullaby for the Texas sky tonight
Your heroes and stars are bright
So hey lone star, there you are shining bright in the dark
Don't wait for your heroes and stars to save your day
