

Figure Eight

They Might Be Giants

Round, can you go around?
And if you can turn around without falling down
You can skate in a figure eight
If you can turn, if you can go straight Turn left, go straight, turn right, straight again
And then do it over, repeat forever
That's all you need to know
That's the way you skate in a figure eight If you can grab a circle in your hands
And twist it, that's an eight If it weren't for the Zamboni
You would never leave the ice
And I think I know the reason why
You never take a break
The sign that means forever
Is a sideways number eight Turn left, go straight, turn right, straight again
And then do it over, repeat forever
That's all you need to know
That's the way you skate in a figure eight And if you twist the number zero
You will get the number eight Turn left, go straight, turn right, straight again
And then do it over, repeat forever
That's all you need to know
That's the way you skate in a figure eight If you can grab a circle in your hands
And twist it, that's an eight
(If you can grab a circle in your hands)
(And twist it, that's an eight) Twist the number zero
You will get the number eight
