

Somebody to Love

Kyrill & Redford

Here is part of an interview with the subject just before LSD is to be administered
My husband is an employee here And he told me that they were looking for normal people

And I volunteered

I see, do you feel you're normal?

I hope I'm normal, i think so

Well a little while back you took quite a series of psychological tests
And i can assure you that you're a very stable and well balanced person as a result of the test

And how do you feel about coming here and drinking this strange material?

A little little nervous perhaps

Well I think that's normal

Well I think it's time for you to have your lysergic acid, drink this down and we'll be back

After a while and see how you're doing

This is a glass of water colorless

Tasteless, it contains 100 gamma of LSD 25, of a milligram

The equivalent of 1 600 of the green

An ounce of this material will make 150,000 such doses

Let us observe the effect some
