

The Hands of Men

Twothiryeight

Some people stay sick in bed
Sick at work or in their heads
Doctors can diagnose
Problems they are having mostRegulate the chemicals
Prescribe all the medicines
Put you on the right road to recoveryThere where nurses moving you
Shifting you from room to room
Nurses without names or faces
Carting you to different places
Subjecting you to 'peace of mind.'Sleep safely in the hands of men
Sleep safely in the hands of men
Sleep safely in the hands of menFrom the doctors to the patients
Please have patience with the nurses
They ask too many questions
They give stupid suggestions
From the doctors to the patients
Please have patience with the nursesAnd you don't need chemicals passing through your head
And you don't need chemicals passing through your head
