The Observer

Brazos

[Music: A. Nasseri / Lyrics: A. Nasseri]So all the stars
Will guide us on our way
The Sextant as a leader
Has duration for all daysLook at the amazing sky
In long and profund discoveries
With a strong and a clear mind he's encryping
Secrets of astronomyIn endless nights
He observes the sky
This publications will change the worldGalileo GalileiOnly what my eyes will see, I will believe!
Day and night - seperated by the lightIn Pisa he's required
To teach the theory
That the stars and all the planets
Revolve around the earth
But he believed
In a different truth
The helocentric one
Proposed by Kopernikus
A new age had begunThe stolen sun
Made their fear rise
And man had sacrificed
A shadow was the reason whyAnd all the servants of the cross - they will deny
Will deny the starlightIn Pisa he's required
To teach the theory
That the stars and all the planets
Revolve around the earth
But he believed
In a different truth
The helocentric one
Proposed by Kopernikus
A new age had begun
