## Brazos

[Music: A. Nasseri / Lyrics: A. Nasseri] So all the stars  
Will guide us on our way  
The Sextant as a leader  
Has duration for all days Look at the amazing sky  
In long and profound discoveries  
With a strong and a clear mind he's encryping  
Secrets of astronomy In endless nights  
He observes the sky  
This publications will change the world Galileo Galilei Only what my eyes will see, I will believe!  
Day and night - seperated by the light In Pisa he's required  
To teach the theory  
That the stars and all the planets  
Revolve around the earth  
But he believed  
In a different truth  
The helocentric one  
Proposed by Kopernikus  
A new age had begun The stolen sun  
Made their fear rise  
And man had sacrificed  
A shadow was the reason why And all the servants of the cross - they will deny  
Will deny the starlight In Pisa he's required  
To teach the theory  
That the stars and all the planets  
Revolve around the earth  
But he believed  
In a different truth  
The helocentric one  
Proposed by Kopernikus  
A new age had begun
