

Genetic Reconstruction

Death

Extending a life with total resistance
To fatal disease, future methods of science
Replacing what is real by using technology
Population control, selecting those who will breed
A specific type of form chosen for the unborn
A mind without emotion
Progressive anatomy
Genetic reconstruction
Evolution in production
[Solos: Murphy, Shuldiner]
Producing a race of human machines
A new age of existence the world will see
Replacing what is real by using technology
Population control, selecting those who will breed
A specific type of form chosen for the unborn
A mind without emotion
Progressive anatomy
Genetic reconstruction
Evolution in production
