

# We're the Future

## Fanfarlo

And at night I see us back to back,  
opposites but joined by the spine  
Yes at night I see us back to back,  
opposites and welded by the spine

We're a copy of a copy  
(Could we be the same?)

A capricious process gone awry  
But I see blind innovation  
(Can we really change?)

I see the future in us  
Does it ever stay?

Can we change, can we go all the way?

If mutations get to have a say  
If I wake up I'll be on my own;  
We're the future, you and I  
So I picture us as pioneers  
As a feat of synchronicity

Yes I count on us to lead the way  
Some day the world will follow  
Or will they run away?

Can we change, can we go all the way?

If mutations get to have a say  
If I wake up I'll be on my own;  
We're the future, you and I  
If we grow and multiply  
Or if we wither, if we die

We can say at least we tried
