

# Around The Universe In Eighty Days

## Klaatu

Come aboard my ship, I've something to show you  
Some new equipment to take us where we're going  
A subspace machine, a hole in the fabric  
Of the very being of the universe Ignition  
Atomic power on  
We must break our orbit and soar right past the planets  
It took man a million years  
To make it only this far  
And we'll leave the solar system very soon... Around the universe in eighty days  
Sit down I think you'll like it out in space  
There's nothing left to stop us now  
We're sure to win the race (Sure to win the race...) In our warp where time and space are one  
We can no longer see the sun  
In fact there's nothing there for us to see  
For light is nowhere near as fast as we Our computer says we've exceeded expectations  
When we reach our departure point there will be celebrations  
What this means is our existence no longer has a limit  
The universe will be our new home Now the earth is just beginning to learn of our existence  
All life in space must learn to live as one  
Maybe now is the time for friendship with our neighbors  
For our planet is the second from the sun Around the universe in eighty days  
Sit down I think you'll like it out in space  
There's nothing left to stop us now  
We're sure to win the race  
(Sure to win the race...)
