Microwaved Uterogestation

Carcass

Fomentatious perflation hydrogenates your foetal cisterna
Coagulating haemorrhage and your congenital herniaDehydrated soup - crumbling hygroma
Pectified sludge - dank, acrid aromaClotting uteral mucus, dissipating your foetus
Melting your uterus and evaporation your cyesisYour molten foetus is reconstituted by warm, molten enzymes
Slowly digested in microwaved slime
Your stomach is churning, heat effervescing your succus
Your innards running like hot, sticky mucus
