Colitis Ulcerosa

Dead Infection

Convulsive spasms make taking food impossible. Large intestine perforation causes decease. Anatomised reveraibility of phlogistic and ulcerous transitions increase. Unbearable agony refuses family condolences. Hospital staff is helpless. A breathing body is undergone the final surgical intervention. It's too late, anyway. An alien molecule floods entails and burns his final breath. Bowels explosion. A compound of semi-digested food flows from his mouth.
