

# Cyber Future

## Gaia Epicus

No more time to waste  
Let's fly into space  
Crossing the universe  
I can see the star light With the speed of light  
We will fly tonight  
Looking for unknown lands  
The future is out there somewhere We fly so high across the sky  
A million light years away I hear you cry Let the journey begin  
Fly away with the wind  
Spread your wings  
Leave your worries behind All that you see is reality  
So welcome to the cyber future  
Future  
Cyber future Time is running out  
Faith is all we've got  
If we find this place  
We can save the human race One more mile to go  
Then we'll know for sure  
If the end has come for us  
Or we will get our victory We fly so high across the sky  
A million light years away I hear you cry Let the journey begin  
Fly away with the wind  
Spread your wings  
Leave your worries behind All that you see is reality  
So welcome to the cyber future  
Future  
Cyber future A fire is burning in the sky  
Is this the end of you and I?  
Take my hand and let us pray  
That we survive one more day I have read it in the sand  
The prophecy is in your hand  
The cyber world is coming fast  
I wonder how long we will last? Cyber, cyber future  
So little time to undo this crime  
Cyber, cyber future  
So little time to undo this crime
