Accelerated Evolution

The Faceless

Chromosomes X and Y, divide and multiply
Constant revolving D.N.A.
Adapting to stimuli through vibrations of nuclei
Until humanity dies awaySo now break it down into the finite compoundsWho could foresee when we crawled from the ocean
Those who could stand upon these shores?
We evolve from primate to man
From man to gods, from gods to dustRyan soloUncharted growth breeds in us new hope
Our phenotypic divergence
Genomes in mutation sparks a revelation
Beginnings of a species convergencepre-choruschorusGreg soloSee this double helix rise like a phoenix
From these ashes
Of humanities flawsRyan solo
Ryan solo
Greg solo
Greg & RyanSo if they want to pit us against survival of the fittest
To see how we will make it through
To survive with distinction a species hell-bent on extinction
If only Darwin knewpre-choruschorusWho could foresee when the first cell was split that the process would lead to thisWe evolve from primate to man from man to gods, from gods to dust
