Primal Directive

The Contortionist

Bridge to analyst; access the secondary plasmic dataholds.
Now viewing all current planetary bodies.
Move to constrain your results to newest sentient life.
Scan the surface. Bring up vitals.Local life thrived much quicker than anticipated.
We are pleased.Focus shifted.
Save the organism through implied relocation.
Inferior understanding limits options and adaptation will be necessary for the specimen to survive.As we map out this universe, all that can be seen is an ocean of emptiness.
This is primal directive.Now we execute standard protocol.
As these cycles are nearing completion, initiate solar cleansing.
Move on, time never waited on its occupants.
Live on, by any means and every technology.You have been defined.
